**Histofreeze® Portable Cryosurgical System** provides a safe and effective treatment for common warts and benign lesions.7 Warts are caused by a common viral infection that penetrates the skin and can be very contagious. If left untreated, they may spread to other parts of the body and even other household members. With Histofreeze, a simple 15-40 second procedure is all it takes to begin the road to healing and repair. Results are comparable to Liquid Nitrogen® and Histofreeze does not require a Freeze-Thaw-Freezer procedure for the use of messy and leaky cones. Histofreeze is CFC-Free and ozone-friendly.6

Ask your healthcare professional if Histofreeze Portable Cryosurgical System is right for you!
